CAN AI KEEP A SECRET?

What should you never share with AI?

SORT DECIDE AGREE

CAN AI KEEP A SECRET?

Some information is safe to share with AI, some is not. The goal of this card is not fear — it is safe and smart use. Students leave with a simple rule they can apply anywhere.

MAIN ACTIVITY

1. Show different information cards one at a time: favourite animal, first name, class topic, password, phone number, home address, a friend's secret.
2. Students sort each into two groups: *OK to share* or *Do not share*. Keep the pace quick — they must decide.
3. Pause on tricky cases. Ask: "Would it be safe to type this into an AI tool? Why or why not?"
4. End with a class rule: *If it is private, personal, or belongs to someone else — stop and ask first.*

MATERIALS

- 10–12 information cards
- Two heading signs: *OK to share / Do not share*

REFLECTION

- Which kinds of information are safe to share?
- Why are passwords, addresses, and private secrets different?
- What should you do if you're not sure whether something is safe?

REALITY CHECK

AI tools can use the information people type — so not everything belongs in the chat box.

Private information should stay protected. When in doubt, don't type it.
