IMAGINE

WHERE DOES AI LIVE?

Children often picture AI as something magical or hidden. This card invites them to compare their mental image with where AI actually runs, and to see that AI depends on real, physical infrastructure.

MAIN ACTIVITY

1. Ask the class: "Where do you think AI lives?"
2. Give each student one minute to draw their answer.
3. Invite 3–4 students to share and explain their drawing.
4. After every voice is heard, reveal the real answer (below) and compare.

MATERIALS

- Paper and markers for every student
- Optional: board or wall to stick drawings on

REFLECTION

- Did the real location of AI match what you imagined?
- Why do people say AI is "in the cloud"?
- Why does AI need powerful computers?

REALITY CHECK

AI runs on servers in data centres.

When someone uses AI, their question travels through the internet to large buildings full of computers. Those computers process the request and send the answer back.
