Mind or machine?

Created by Pablo Sandri in collaboration with PiNA · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 01 · LEVEL 1 · BEGINNER

Where does AI live?

Goal: *Students discover that AI runs on real computers in data centres, not "in the air".*

LESSON PLAN · 45 MIN

- 5 min — Ask: "Where does AI live?" Give no hints.
- 10 min — Everyone draws their answer (Sheet 1A).
- 10 min — Gallery: 3–4 students explain their drawing.
- 10 min — Reveal: follow the journey of a question (Sheet 1B).
- 10 min — QR game, then the questions below.

BIG IDEA

Big AI tools like chatbots live in data centres: huge buildings full of computers. Your question travels there through the internet, and the answer comes back in seconds. (Small AI, like face unlock, can run on your phone.)

ASK THE CLASS

- Did the real answer match your drawing?
- Why do people say AI is "in the cloud"?
- What does a data centre need to work?

You need: Sheets 1A and 1B, pencils and colours.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — Levels 1–2 · Cards 1–18

How to use the cards

1. Read the teacher side of the card before class.
2. Print the activity sheets for that card (Sheets 1A–18B).
3. Run the activity. Each card has a 45-minute plan.
4. Optional: students scan the QR code and play a short game (no login needed).
5. Finish with the questions under "Ask the class".

Feedback? The last sheet is a 3-question form for teachers.

FOR THE TEACHER — CARD 03 · LEVEL 1 · BEGINNER

Does AI think like a human?

Goal: *Students tell the difference between finding patterns and truly understanding.*

LESSON PLAN · 45 MIN

- 5 min — Say with a sigh: "Oh great, it's raining AGAIN!" Does the speaker like rain? How do you know?
- 15 min — Read the situation cards (Sheet 3A). Students walk to the Human Mind or Pattern Machine corner (Sheet 3B).
- 10 min — After each card, one student per corner explains the choice.
- 10 min — QR game.
- 5 min — Wrap up with the big idea.

BIG IDEA

AI finds patterns in huge amounts of text and pictures, very fast. But it does not feel, remember or live like you do. It can copy the shape of a thought without having one.

ASK THE CLASS

- Can something sound smart without understanding?
- How could an AI tell that someone is being sarcastic?
- When is finding patterns enough?

You need: Sheet 3A, the two signs from Sheet 3B on opposite walls.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 02 · LEVEL 1 · BEGINNER

What is AI good at?

Goal: *Students sort everyday tasks and see that AI and people have different strengths, and often work best together.*

LESSON PLAN · 45 MIN

- 5 min — Quick vote: "Can AI do everything?"
- 15 min — Groups sort the 16 task cards (Sheet 2A) under three signs: AI is great / A human is better / Better together.
- 10 min — Talk about the tricky cards. Groups defend their choice.
- 10 min — QR game.
- 5 min — Wrap up with the big idea.

BIG IDEA

AI is great at fast, repetitive jobs with lots of data. People are better at feelings, fairness and new ideas. The best results often come from AI and people working together.

ASK THE CLASS

- Which card was hardest to place?
- Can AI really understand how your friend feels?
- Name a job where AI and a person could team up.

You need: Sheet 2A (one per group), scissors.

Created by Pablo Sandri in collaboration with PiNA

If AI makes a mistake, who is responsible?

ROLE-PLAY · VOTE · DISCUSS

Scan to play
Responsibility Chain

Created by Pablo Sandri in collaboration with PiNA · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 05 · LEVEL 1 · BEGINNER

How does AI learn?

Goal: *Students play "AI in training" and see how the examples it learns from shape what AI can recognise.*

LESSON PLAN · 45 MIN

- 5 min — Say: "Today you are the AI. Learn what cats and dogs look like."
- 10 min — Show the training cards (Sheet 5A). Don't point it out, but all cats are light and all dogs are big.
- 10 min — Test: show the 4 test cards (Sheet 5B). Students vote: cat or dog?
- 10 min — QR game.
- 10 min — Discuss: what went wrong? Which examples would fix it?

BIG IDEA

AI learns from examples, millions of them. If all the examples look alike, AI gets confused by anything different. More varied examples make a better and fairer AI.

ASK THE CLASS

- What clues did you use to decide?
- Why was the dark cat tricky?
- Which examples would you add to train a better AI?

You need: Sheets 5A and 5B (on screen or printed).

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 04 · LEVEL 1 · BEGINNER

Can AI make mistakes?

Goal: *Students learn that AI can be wrong, especially when information is unclear, and that sounding sure is not the same as being right.*

LESSON PLAN · 45 MIN

- 5 min — Ask: "Is AI always right?"
- 15 min — Show the 6 tricky pictures (Sheet 4A) one at a time. Students write a guess and show how sure they are with 1–3 fingers.
- 5 min — Reveal the answers (Sheet 4B). Who was sure but wrong?
- 10 min — QR game: Mistake Hunter.
- 10 min — Discuss: if it was hard for us, could it be hard for AI too?

BIG IDEA

AI does not know, it predicts what is most likely. Blurry, hidden or unusual information can fool it, just like us. A fast, confident answer still needs checking.

ASK THE CLASS

- Which picture was hardest, and why?
- Did anyone feel sure but turn out wrong?
- When should we double-check an AI answer?

You need: Sheets 4A and 4B (on screen or printed), paper for guesses.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 07 · LEVEL 1 · BEGINNER

Who is responsible?

Goal: *Students see the chain of people behind every AI result, and that responsibility is often shared.*

LESSON PLAN · 50 MIN

- 5 min — Ask: "If a robot breaks a window, who is to blame?"
- 15 min — Read a scenario card (Sheet 7A). Students move to a corner sign (Sheet 7B): user, adult, makers or more than one.
- 10 min — Groups defend their choice. Notice how often responsibility is shared.
- 10 min — Build a responsibility chain together: who chose, checked, fixed and learned?
- 10 min — QR game: Responsibility Chain.

BIG IDEA

AI can make outputs, but people stay responsible. People design AI, choose when to use it, check the result and fix mistakes. "The AI did it" is never the full story.

ASK THE CLASS

- Can a machine be responsible the way a person is?
- Who should check AI before it is used in real life?
- What should happen after an AI mistake?

You need: Sheets 7A and 7B.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 06 · LEVEL 1 · BEGINNER

Should you trust AI?

Goal: *Students learn that AI can sound sure and still be wrong, and practise deciding when to trust, check or reject an answer.*

LESSON PLAN · 45 MIN

- 5 min — Ask: "If something sounds smart, is it true?"
- 15 min — Read the three AI answers (Sheet 6A). Students vote with the signs: Trust, Check or Reject (Sheet 6B).
- 10 min — Reveal the best answer. Which wrong answer sounded most convincing, and why?
- 10 min — QR game: Trust Checker.
- 5 min — Make a class list of topics we always check.

BIG IDEA

AI predicts likely words. It does not automatically know what is true, so it can sound right and still be wrong. Good users check important facts with a trusted source.

ASK THE CLASS

- Was the most confident answer the best one?
- What can you do when an answer sounds smart but you are not sure?
- Which topics should we always double-check?

You need: Sheets 6A and 6B.

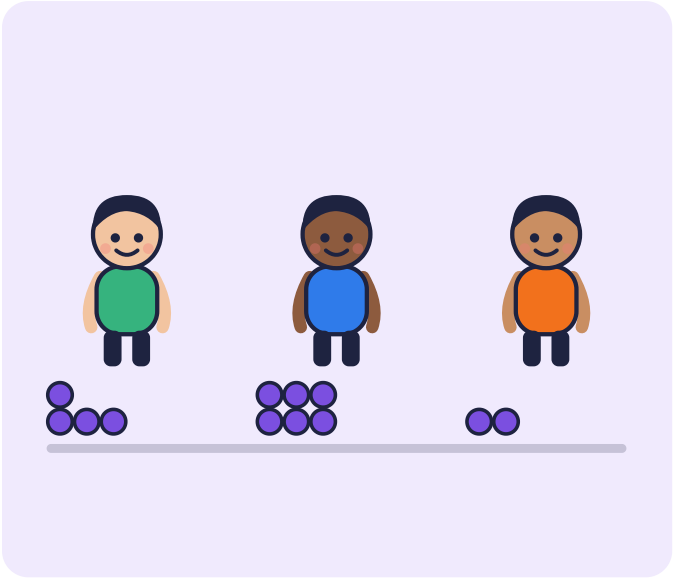

Created by Pablo Sandri in collaboration with PiNA

CARD 11

LEVEL 2 · INTERMEDIATE

How do you talk to AI?

Does the way you ask change what you get?

PROMPT · COMPARE · IMPROVE

Scan to play
Prompt Trainer

Created by Pablo Sandri in collaboration with PiNA · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 09 · LEVEL 1 · BEGINNER

Should AI choose for you?

Goal: *Students tell the difference between a useful AI suggestion and a choice that should belong to a person.*

LESSON PLAN · 45 MIN

- **5 min** Put up the three zone signs (Sheet 9B): AI can choose, AI can help, A human should choose.
- **15 min** Read one scenario card at a time (Sheet 9A). Students move to a zone.
- **10 min** After each one ask: what information would AI use, and what important human information might it miss?
- **10 min** QR game: Decision Zones.
- **5 min** End with a class sentence: "AI can suggest. People decide."

BIG IDEA

AI can find patterns and make suggestions, but important choices involve feelings, relationships and responsibility. A suggestion is a starting point, not the end of the conversation.

ASK THE CLASS

- When is an AI suggestion useful?
- When should a person make the final choice?
- What is the difference between advice and a decision?

You need: Sheets 9A and 9B.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 08 · LEVEL 1 · BEGINNER

Can AI know what is fair?

Goal: *Students discover that fair is not always the same as equal, and that people, not machines, decide which rule is fair.*

LESSON PLAN · 50 MIN

- **10 min** Show the 3 character cards (Sheet 8A). Give the class 12 stickers: "How should we share them?"
- **10 min** Add the information on the cards. Should the stickers still be shared equally?
- **10 min** Try three AI rules: same for everyone, more for effort, more for need. Which feels fair? Who chose the rule?
- **10 min** Read the fairness scenarios (Sheet 8B). Students move to Fair, Not fair or Not sure (Sheet 8C).
- **10 min** QR game: Fairness Lab.

BIG IDEA

AI can apply a rule perfectly, but people decide which rule is fair. The same rule can be fair in one situation and unfair in another.

ASK THE CLASS

- Is equal always fair?
- Can one rule be fair in every situation?
- Who should decide what fair means?

You need: Sheets 8A, 8B and 8C, 12 stickers or counters.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 11 · LEVEL 2 · INTERMEDIATE

How do you talk to AI?

Goal: *Students see that the quality of a request shapes the quality of the answer, and practise writing clear, specific prompts.*

LESSON PLAN · 45 MIN

- **5 min** Read two requests and their answers: "Tell me about dogs" and "Describe a day in the life of a guide dog in a city, in 100 words."
- **15 min** In pairs, students rewrite the vague prompts on Sheet 11A to make them clear and specific.
- **10 min** Compare old and new prompts. What changed? Which ingredients helped?
- **10 min** Write a class Prompt Rulebook with 3 to 5 rules (Sheet 11A, bottom).
- **5 min** QR game: Prompt Trainer.

BIG IDEA

AI fills the gaps in your request with guesses. The clearer your prompt, the less it has to guess. Clarity, context and detail are also the skills of good writing.

ASK THE CLASS

- What makes a prompt useful?
- Why does context help?
- Could the same skills help you write better emails or stories?

You need: Sheet 11A (one per pair). Optional: an AI tool, or print the answers in advance.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 10 · LEVEL 1 · BEGINNER

Can AI keep a secret?

Goal: *Students learn which information is safe to share with AI tools and leave with a simple rule they can use anywhere.*

LESSON PLAN · 45 MIN

- **5 min** Ask: "Where does a message go when you type it into an AI?" (Remember card 1!)
- **15 min** Show the information cards (Sheet 10A) one at a time. Students quickly sort them under the two signs (Sheet 10B).
- **10 min** Stop at tricky cards: "Would it be safe to type this into an AI tool? Why?"
- **10 min** QR game: Privacy Sorter.
- **5 min** Agree on a class rule: if it is private, personal or someone else's, stop and ask first.

BIG IDEA

AI tools can store and use what people type, so not everything belongs in the chat box. Private information should stay protected. When in doubt, don't type it.

ASK THE CLASS

- Which kinds of information are safe to share?
- Why are passwords, addresses and secrets different?
- What should you do if you are not sure?

You need: Sheets 10A and 10B.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

Can AI be creative?

Is making something new the same as creating something meaningful?

COMPARE · JUDGE · DEBATE

Scan to play
Creativity Debate

Created by Pablo Sandri in collaboration with PiNA · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 13 · LEVEL 2 · INTERMEDIATE

Does AI use energy?

Goal: Students connect a digital action with physical things: a question goes to a data centre that needs electricity and cooling. The goal is awareness, not guilt.

LESSON PLAN · 45 MIN

- 5 min — Recall card 1: where does an AI question go? What does a data centre need to work?
- 15 min — Groups cut out the task strips (Sheet 13A) and rank them from most to least energy.
- 10 min — Read the key. Any surprises? Compare the groups' rankings.
- 10 min — Design an energy label for an AI task, like a food label (Sheet 13B).
- 5 min — QR game: Carbon Counter.

BIG IDEA

Data centres run day and night and use about 1–2% of the world's electricity, and this is growing with AI. One question is small, but billions add up. Training big models costs the most.

ASK THE CLASS

- Should we think about energy before using AI?
- Who is responsible: users, companies or governments?
- Could AI also help to save energy?

You need: Sheets 13A and 13B, scissors.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 12 · LEVEL 2 · INTERMEDIATE

Can you tell if AI made it?

Goal: Students practise careful reading: they spot clues of personal voice and of typical AI style, and learn that no one can be completely sure.

LESSON PLAN · 45 MIN

- 5 min — Ask: "Could you tell if your friend's homework was written by AI?"
- 15 min — In pairs, read the four texts on Sheet 12A. Underline clues of a personal voice, circle clues of typical AI style.
- 10 min — Vote on each text, then read the key. Which were hardest? Why?
- 10 min — Write three clues together. Could each clue be faked?
- 5 min — QR game: Clue Spotter.

BIG IDEA

AI detection tools make many mistakes and should never be used as proof that someone cheated. The real skill is critical reading: noticing voice, detail and feeling.

ASK THE CLASS

- What does "personal voice" mean?
- Why might AI text feel flat or generic?
- Does it matter if we can tell?

You need: Sheet 12A (one per pair), coloured pens.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 15 · LEVEL 2 · INTERMEDIATE

Can AI be creative?

Goal: Students build the words for a real open debate: originality, intention, meaning, style and remixing. The aim is a more careful view, not one right answer.

LESSON PLAN · 50 MIN

- 10 min — Read the AI poem on Sheet 15A and a poem written by a student or a local poet on the same topic. Don't say which is which.
- 10 min — Vote: which is more creative, emotional, surprising, meaningful? Then reveal the sources.
- 10 min — Discuss: AI remixes patterns from millions of works. Is that creativity, or clever copying? Do people also remix?
- 15 min — Debate: half the class argues "AI can be creative", half argues "AI cannot". Then switch sides.
- 5 min — QR game: Creativity Debate.

BIG IDEA

As far as we know, AI has no experiences, intentions or feelings like ours. It makes things that can look creative because it learned from huge amounts of human work. Whether that is "real" creativity is an open question.

ASK THE CLASS

- What does "creative" mean to you?
- Does knowing who made something change how you value it?
- Should AI-made art be labelled?

You need: Sheet 15A and a poem by a student or local poet, voting slips.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER

CARD 14 · LEVEL 2 · INTERMEDIATE

Where does AI bias come from?

Goal: Students see that bias usually comes from the data and the choices people make, not from a machine that wants to be unfair.

LESSON PLAN · 50 MIN

- 5 min — Ask the class to quickly draw "a scientist". Count: how many look alike?
- 10 min — Discuss: where do our pictures come from? Books, films, adverts. AI learns from pictures like these too.
- 15 min — Groups fill in Sheet 14A: choose 20 pictures to teach an AI what "a good student" looks like. What do they include? What is left out?
- 10 min — Swap sheets and critique: whose idea of "good student" is this?
- 10 min — QR game: Dataset Builder.

BIG IDEA

AI reflects the data it learns from. If the data is incomplete or one-sided, the AI repeats and can even strengthen that bias. The problem starts with who collects the data, and how.

ASK THE CLASS

- Can a dataset ever be completely neutral?
- Who decides what goes into the training data?
- What happens when a biased AI makes real decisions?

You need: Sheet 14A (one per group), paper for drawing.

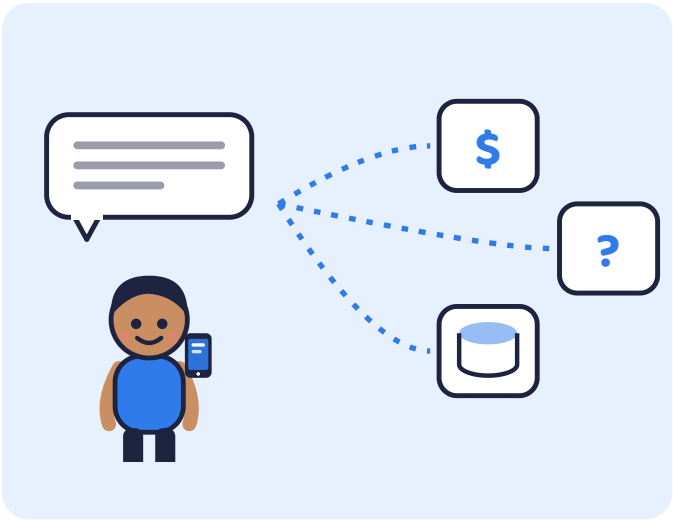

Created by Pablo Sandri in collaboration with PiNA

CARD 18

LEVEL 2 · INTERMEDIATE

Will AI change jobs?

Which jobs will AI change, and what does that mean for people?

SORT · PREDICT · IMAGINE

Scan to play
Job Evolution

Created by Pablo Sandri in collaboration with PiNA · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 17 · LEVEL 2 · INTERMEDIATE

Should AI help you study?

Goal: *Students build judgment, not just rules: when does AI support my learning, and when does it replace it?*

LESSON PLAN · 45 MIN

- 5 min — Draw a line on the board or floor: Definitely okay / It depends / Not okay (signs on Sheet 17B).
- 15 min — Read the 10 scenario cards (Sheet 17A). Students stand on the line or hold up a sign.
- 10 min — Discuss disagreements: why did people place the same card differently? What are the principles behind it?
- 10 min — The class writes a short "smart AI use" policy and puts it on the wall.
- 5 min — QR game: Study Smart.

BIG IDEA

Using AI to understand something is different from using AI to avoid understanding it. The second may give a better mark today, but weaker skills tomorrow.

ASK THE CLASS

- What is the difference between using a tool and being replaced by one?
- When is struggling with a problem actually useful?
- Can you still call it your work?

You need: Sheets 17A and 17B.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 16 · LEVEL 2 · INTERMEDIATE

What happens to your data?

Goal: *Students follow one concrete action, typing a message, and map what can happen to that data: stored, analysed, used for training, shared.*

LESSON PLAN · 50 MIN

- 5 min — Ask: "What do you give an AI chatbot when you use it?" List on the board: messages, device, place, time, topics...
- 10 min — Read the simplified terms of an example app (Sheet 16A). What can the app do with your data?
- 15 min — Groups draw the data journey (Sheet 16B): you → app → stored? analysed? used for training? shared?
- 10 min — Each student designs a data rights card: three promises they want from an app (Sheet 16B, bottom).
- 10 min — QR game: Data Mapper.

BIG IDEA

Free AI tools are paid for somehow: with adverts, paid plans, or by using what people type to improve the AI. Your messages and behaviour can be stored and analysed. When you use these tools, you also contribute to them.

ASK THE CLASS

- Is free always free?
- Who benefits when your data is used?
- What would change if you had full control over your data?

You need: Sheets 16A and 16B, coloured pens.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0

FOR THE TEACHER — CARD 18 · LEVEL 2 · INTERMEDIATE

Will AI change jobs?

Goal: *Students think in a structured way about change: which tasks AI can do, which human skills stay important, and how new jobs appear. No panic and no blind optimism.*

LESSON PLAN · 50 MIN

- 5 min — Ask: "What job do you want to do? Will AI be part of it?"
- 15 min — Groups sort the 12 job cards (Sheet 18A) under the three zone signs (Sheet 18B).
- 10 min — Compare sorts. What criteria did groups use? Which jobs caused the most debate?
- 10 min — Each student picks one job and writes: what will it look like in 20 years? What new skill will people need?
- 10 min — QR game: Job Evolution.

BIG IDEA

AI is more likely to change tasks inside jobs than to remove whole jobs. But some jobs will shrink, and the change affects people unequally, especially those in routine, lower-paid work.

ASK THE CLASS

- Is losing a boring task always a loss?
- What happens to people whose jobs are automated?
- Which skills will matter most in a world with AI?

You need: Sheets 18A and 18B, writing paper.

Created by Pablo Sandri in collaboration with PiNA
Free to use and share with credit · CC BY-NC-SA 4.0
