WHO IS RESPONSIBLE?

If AI makes a mistake, who is responsible?

WHO IS RESPONSIBLE?

Children sometimes talk about AI as if it chooses alone. This card helps them see the chain of people behind every AI decision: who used it, who approved it, who built it — and how responsibility is shared.

MAIN ACTIVITY

1. Read a short scenario: an AI poster shows the wrong date / a chatbot gives unsafe advice / an AI marking tool is unfair.
2. Students vote on who is responsible: the *user*, the *adult who approved it*, the *people who built it*, or *more than one group*.
3. Let students defend their choices. Notice that responsibility is often shared.
4. Build a "responsibility chain" together: who chose the tool, who checked the result, who should fix the problem, how to prevent it next time.

MATERIALS

- 3–4 scenario cards with realistic situations
- Corner signs or voting cards: *user*, *adult*, *maker*, *more than one*

REFLECTION

- Can a machine be responsible the same way a person is?
- Who should check AI before its answer is used in real life?
- What should happen after an AI mistake so people stay safe?

REALITY CHECK

AI can generate outputs — but people remain responsible.

People design AI, choose when to use it, check the result, and fix mistakes. "The AI did it" is never the full story.
