SHOULD AI CHOOSE FOR YOU?

Should AI decide things for people?

SHOULD AI CHOOSE FOR YOU?

AI recommends songs, routes, books, videos. This card helps students see the difference between a useful suggestion and a choice that should still belong to a person.

MAIN ACTIVITY

1. Create 3 zones in the room: *AI can choose*, *AI can help*, *Human should choose*.
2. Read one scenario at a time: what song to play, which route is shortest, what gift to make, who should be class captain, whom to trust. Students move to a zone.
3. After each choice, ask what information AI might use — and what important human information it might miss.
4. End with a class sentence: *AI can suggest. People decide.*

MATERIALS

- 6–8 scenario cards
- 3 room signs: *AI can choose*, *AI can help*, *Human should choose*

REFLECTION

- When is an AI suggestion useful?
- When should a person make the final choice?
- What is the difference between *advice* and a *decision*?

REALITY CHECK

AI can find patterns and make suggestions — but important choices involve feelings, relationships, and responsibility.

A recommendation is a starting point, not the end of the conversation.
