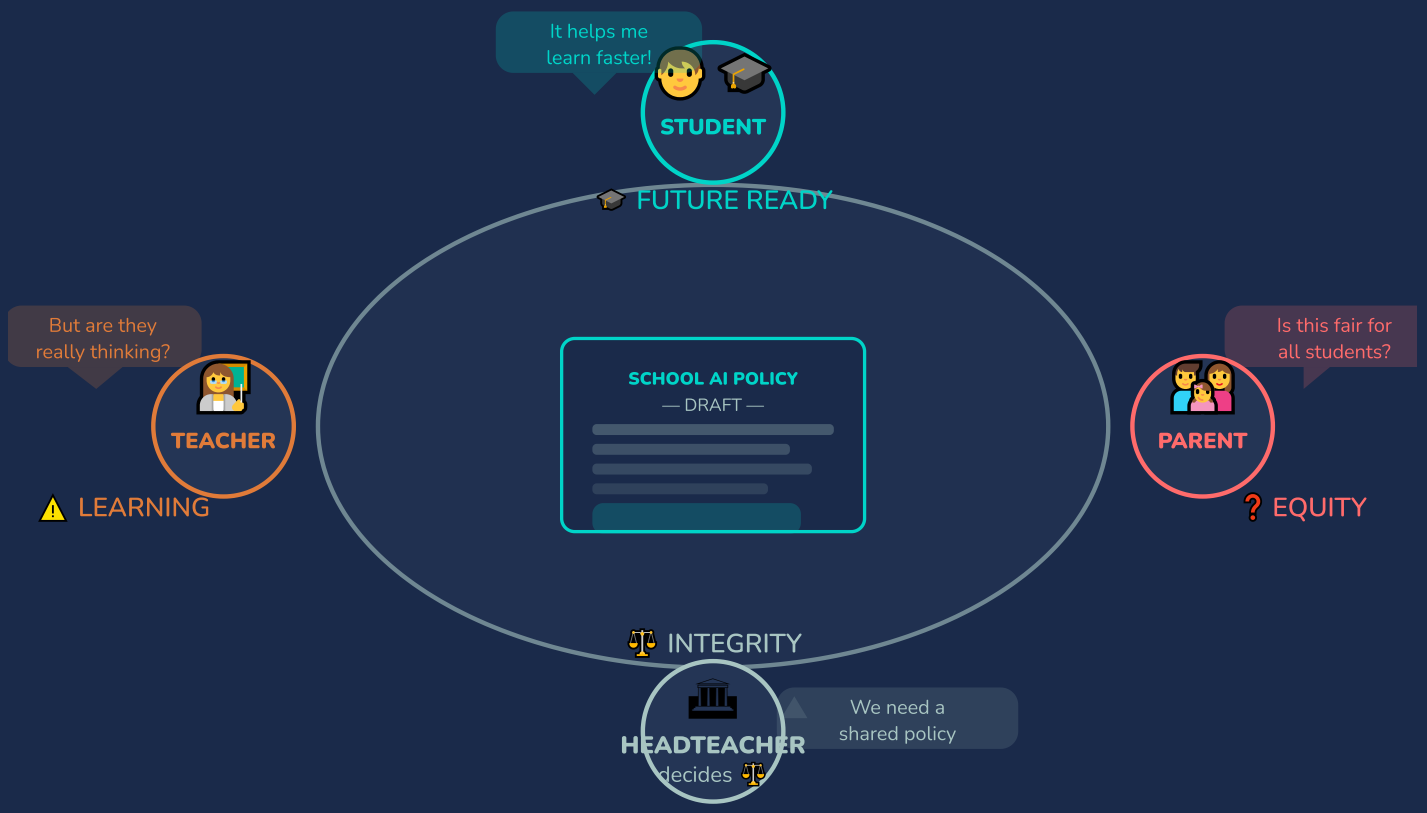
SHOULD SCHOOLS ALLOW AI?

How do you make a fair policy for something that changes every week?



DRAFT | NEGOTIATE | VOTE

SHOULD SCHOOLS ALLOW AI?

Policy-making requires holding competing values simultaneously: fairness, learning integrity, access equity, preparation for the future. There is no clean answer — that is the lesson.

MAIN ACTIVITY

1. Students receive role cards: student, teacher, parent, school leader, disability advocate, AI company representative. Each comes with a one-paragraph briefing on their perspective and priorities.
2. Groups of 6 (one per role) have 15 minutes to negotiate a draft school AI policy addressing: when AI is allowed, when it is not, how violations are handled, and how to ensure equity of access.
3. Each group presents their policy in 2 minutes. The class votes on the most balanced policy.
4. Debrief: which role was hardest to represent? Which values came into conflict?

MATERIALS

- Role cards (6 per group, with briefings)
- Blank policy template (4 sections)
- Voting slips for class vote
- Timer (15 min negotiation)
- Conflict values card (fairness vs safety etc.)

REFLECTION

- Whose interests should matter most in a school AI policy?
- What happens when a policy can't keep up with technology?
- Is a school the right place to decide, or should it be national?
- How do you make a policy fair when access is unequal?

REALITY CHECK

Many schools are making AI policies right now with very little evidence.

Policy-makers are deciding under genuine uncertainty about long-term effects. The process of negotiating values — even without a clean answer — is exactly what students need to practise.
